

Cognitive Blueprint AI Engine

The Navigational Beacon & Human Profiling API for
Next-Generation Applications & AI Mentors.

Transform permanent spatiotemporal coordinates into an enduring Innate Architectural Map —
empowering digital products with deep behavioral, cognitive, and constitutional empathy.

Moving beyond superficial personalization to innate architectural mapping.

Modern technology reduces human complexity to superficial surveys, demographic buckets, or battery-draining behavioral tracking. We provide an unchanging, mathematically derived baseline that honors true human boundaries.

The Old Way

Input: Superficial surveys causing user fatigue.

Tracking: Invasive real-time surveillance (battery drain, privacy risks).

Output: Generic demographic buckets stripping away individuality.

The Cognitive Blueprint Way

Input: Permanent spatiotemporal birth coordinates.

Tracking: Zero real-time tracking; enduring constitutional rhythms computed once.

Output: A lifelong Innate Architectural Map honoring sovereign purpose.

The computational flow from spatiotemporal inputs to supportive human experiences.

Five analytical criteria encompassing 33 specialized multi-dimensional engines.

Criterion 1 (Engines 1–9): **Identity & Sovereign Architecture.**

Who is this individual at their core?
(Constitutional temperament, natural
decision compass).

Criterion 3 (Engines 16–21): **Vocation, Craft & Capital** **Architecture.**

What is their natural mastery?
(Creative rhythms, authentic leadership
posture, capital stewardship).

Criterion 5 (Engines 28–33): **Operating Mode, Equilibrium** **& Bio-Prescriptions.**

How do they restore? (Nervous system
sanctuaries, sensory nourishment,
restorative sleep).

Criterion 2 (Engines 10–15): **Inhibitors, Shadows &** **Structural Blocks.**

Where is the friction? (Somatic
tension, inherited patterns,
energetic leaks).

Criterion 4 (Engines 22–27): **Direction, Evolution &** **Strategic Navigation.**

How do they navigate time?
(Life seasons, environmental
resonance, antifragility).

Over 900 standardized vector codes and 26 Sovereign Cross-Engine Alerts.

Flexible integration patterns for continuous telemetry and AI prompt enrichment.

Method A: Direct Telemetry UI

Power custom UIs with 0-100 continuous scores, stamina gauges, and balance ratios based strictly on the raw math metrics.

Cognitive Blueprint
JSON Payload

Method B: AI Copilot & LLM RAG

Enrich context for OpenAI, Claude, or LangChain. Match vector keys against our open dictionaries to inject deep, respectful mentor interpretations directly into AI agents.

The API provides the precise math; our open-source knowledge base provides the profound meaning.

The Repository:

github.com/fractaldecipher/Cognitive-Blueprint-AI-Docs

The Dictionaries:

33 open vector interpretation dictionaries spanning all five criteria.

The Protocols:

26 complete diagnostic alert interpretations bridging the VEC_ standard taxonomy.

The Value:

Developers can access extensive real-world implementation benchmarks directly, ensuring they can translate raw engine telemetry into deep, humane intelligence without guessing.

Zero-data retention, ephemeral statelessness, and Architectural Amnesia.

Versatile human-centered applications driven by innate constitutional rhythms.

Context-Aware AI Mentors: AI agents that communicate in harmony with a user's natural decision style and boundaries.

Sustainable Deep-Work Planners: Scheduling tools based on natural metabolic rhythms, replacing rigid 8-hour factory dogmas.

Founder Craft Navigators: Solopreneur advisory tools aligning business models with natural talents to prevent burnout.

Restorative Sleep Sanctuaries: Holistic apps offering personalized sensory reset routines and acoustic quietude bio-prescriptions.

Adaptive Learning Companions: EdTech platforms honoring whether a user learns via deep foundational research or experiential trial-and-error.

Real-world synthesis benchmark: The Nikola Tesla architecture.

The Input:

By passing simply 1856-07-10 00:00, Smiljan, the API outputs 5 modular JSONs (criterion_1.json to criterion_5.json).

The Telemetry:

The engine instantly calculates **extreme nocturnal strain**, a **brilliant but sensitive nervous system**, and **intense financial vulnerabilities**.

The Translation:

By cross-referencing the open dictionaries, the raw telemetry translates into 33 deep clinical inquiry syntheses—demonstrating exactly how builders translate numbers into profoundly accurate, purpose-driven life guidance.

Transparent subscription tiers structured by architectural depth
